

IRVING, Texas, August 1, 2019 – Alliance Neurodiagnostics, the leading provider of in-home video-EEG services in the United States, today announced gold corporate membership in the NAMCP Medical Directors Institute.

Last month, “The real-world economic impact of home-based video electroencephalography: the payer perspective,” a study led by Alliance Chief Medical Officer Dr. Jeremy D. Slater, M.D., ABCN, and Alliance President Conor M. Butts was published in the Journal of Medical Economics. It found that outpatient video-EEG monitoring is three times less expensive than inpatient monitoring - by approximately \$10,000 - and has equivalent diagnostic value.

“Alliance is thrilled to partner with an organization that has the shared mission of ‘positively impact[ing] patient outcomes through the use of new technologies,’” said CEO J. Randall Keene. “Our primary focus is improving patients’ lives with the delivery of quality, convenient, and affordable care.”

Alliance looks forward to providing valuable input to the NAMCP Corporate Partner Institutes Council, and consulting with the organization’s talented medical directors.

“We are excited to have Alliance Neurodiagnostics join the NAMCP Medical Directors Institute as a corporate partner,” said Executive Vice President W.C. Williams III, M.D. “NAMCP’s medical director members need to be informed about the latest technologies available, especially in cases where they improve outcomes and make care more affordable for patients. We look forward to collaborating with Alliance around these issues.”

### **About Alliance Neurodiagnostics**

Alliance Neurodiagnostics is the largest provider of in-home, video-monitored EEG in the country. The company offers diagnostic testing with an emphasis on the innovative delivery of healthcare services that enables physicians to create treatment plans and improve patients' quality of life. The company works with more than 500 physicians to serve patients in 35 states, providing comprehensive reporting for routine and ambulatory EEG services. Alliance Neurodiagnostics monitors patients during the testing to ensure accuracy and the quality of our services. These services are supported by a cloud-based platform that allows physicians and neurologists to access and review patient data from anywhere in the world. Sleep diagnostic testing services are also provided, nationwide, to assist in identifying and treating suspected sleep disorders. ### **About the NAMCP Medical Directors Institute**

NAMCP Medical Directors Institute, a non-profit membership association, was established in 1991 to provide tools, education, and resources to medical directors, practicing physicians, and other healthcare professionals. The membership consists of medical directors and physicians from purchaser, plan, and provider healthcare delivery systems. NAMCP Medical Directors Institute resources help members respond to opportunities and challenges while helping improve healthcare outcomes, and ultimately the lives of members and patients.
